## *How to Fly*

## **COURSE DESCRIPTIONS**

### **Introduction to Radio-Controlled Aircraft**

This course focuses on the basics of radio control aircraft, where you will learn a few of the possibilities that are available in this fun and exciting hobby! There will be a presentation providing a larger array of information. The students will rotate through several stations where they will focus on various aspects of radio controlled hobbies to include: flying an RC airplane on a buddy box with an expert instructor, spending time on an RC simulator, flight and 3-D demonstrations, and introduction to FPV and drones. You will have plenty of time to ask questions and talk to experts in the hobby.

### **Assemble and Fly a Radio-Controlled Aircraft**

This course focuses on assembling and flying a simple radio controlled aircraft. A kit airplane will be provided for each student, which can be assembled in a short amount of time. In addition to assembling their own RC airplane, students will learn how to properly charge the airplane's batteries, do a preflight check, learn how to fly the airplane, as well as be provided with resources for learning more about their new RC airplane and how they can collaborate with local clubs. At the end of the class, each student will take home their newly assembled airplane! Throughout the class, experts will be on hand to help with the assembly, set up and first flights of the airplane, as well as answer any questions you might have! The deadline to register for this class is Friday, April 28.

### **Advanced Radio-Controlled Aircraft Flying**

Valley RC flyers club will be hosting a radio controlled information presentation with a question and answer session about this exciting hobby at their season kick off meeting at Rustad recreation Center. The remaining sessions will be held on Tuesdays at Valley RC flyers clubs flying field until October 17. Instruction will begin at 5:30 PM and will go until sunset if weather conditions allow. The club field is located 1 mile east of Kragnes, MN. Interested participants do not need to have their own airplane, as members of the club will have options on hand to use. However, if you do have your own airplane and just need a little help, there will be people available to answer questions and troubleshoot any problems.
